

Czech Space Alliance (CSA) goals

The goals and activities will be developing in function of the changes of Czech Republic's position in the European Space Agency, and those of local space infrastructures (be they official-governmental or otherwise) which are involved in this relationship. In principle our intention is to focus on the following:

1. To represent the voice of Czech space SMEs to local and international partners, such as the CSO/CBSA (Czech Space Office and the Czech Board for Space Activities under the Ministry of Education) and ESA or ESA member state organisations respectively.
2. To present ourselves jointly as one entity, where possible, in relevant professional conferences, exhibitions, EU actions, etc.
3. To develop relationship with similar industrial space organisations and/or space agencies in other countries, with the aim of developing and improving business contacts and to support the CSA members' endeavours in their business goals in those countries.
4. To establish a forum for discussions of technical or other aspects relevant to participation of Czech SMEs in international space projects. To collect and share out information about space developments and opportunities, which can have practical relevance for the CSA members.
5. To create a base group from which members could create consortia with the objective to participate in space projects.
6. To support the activities of existing and possible future Czech entities (such as the CSO and CBSA as above) which are striving to help the growth of Czech involvement in ESA or in projects of other space organisations, and which will help participation of Czech SMEs.
